These Revolutionary Light Bulbs Will Save You Hundreds of Dollars!

The LED Revolution has begun. Jump on board and start saving with our huge selection of LED Replacement Bulbs. LED bulbs last 20 to 30 times longer than incandescent bulbs and they are definitely energy-wise. If you've ever burned your fingers on an incandescent that heat = wasted energy.

Yes, the initial purchase price of LED bulbs is higher than for incandescent bulbs. But when you factor in the electricity cost to run incandescent bulbs vs. LED, the argument becomes compelling. LEDs produce the same amount of light as incandescents (called "lumens"), but using far less energy. So, when you replace an incandescent bulb with an LED, you are getting the same lumens output for a small fraction of the energy use – and cost. The savings start adding up as soon as you turn on the lights.
